

# Finding the Internet Submarine Cable Map

We all know that Internet is connected using the fiber optic cables. Those cables are layered under the sea.

As IT professionals we are required to know the best Routes when it comes to international/geographical connectivity.

For that we need to know the physical backbone connectivity.

Below two websites provide the Submarine Cable Map in a clear and concise manner;

1. <https://www.submarinecablemap.com>
2. <https://live.infrapedia.com>
