

Isolate and resolve problems in Oracle – an Easy Way

As DBA, we have to isolate the problem and then resolve the issue in Databases.

When working with Oracle, we face several issues if the Oracle Enterprise Manager is not installed on the Operating System.

This tool is a good replacement for Oracle Enterprise Manager.

This tool consists of below features;

- View enterprise-level performance at a glance
- Identify servers and resource areas where performance degradation originates
- Diagnose and resolve issues quickly with drill-downs and built-in expert advice
- Automate performance metric analysis and responses for fast issue resolution
